Frymaster[®]

Instruction Sheet

Follow these instructions to install the Probe Guard in Tube Fryers. Order 130252832 tool to install the kit.

* NOTE: If the tubes are allowed to cool, a wrench or hand may be used in place of the tool to hold the bottom guard in place when tightening.

- 1. Turn off the fryer.
- 2. Drain the oil from the frypot.
- 3. Using the photo as a reference for orientation, slide the top guard on the bolt (see Figure 1).
- 4. Using the photo as a reference for orientation, screw the bottom guard assembly onto the bolt (see Figure 2). Use the 6" bolt for 6" HD Tubes. Use the 4" bolt for 4" Non-HD tubes Use the 5.5" bolt for 5" Non-HD Tubes.
- 5. Using pliers, twist the pliers and distort the last two threads of the bolt, so the nut resists unscrewing (see Figure 3). WARNING: Skipping this step can allow the bottom guard assembly to loosen and fall off, which may cause damage to the drain.
- 6. Tighten the bolt until there is resistance on the bottom threads (see Figure 4).
- 7. Insert the guard vertically, starting at the rear of Figures 5 & 6).
- 8. Slide the assembly up within approximately and inch or a fingers distance from the tip of the temperature probe (see Figure 7).

the frypot as shown (see

Figure 7

- 9. Slide the tool down between the tubes and under the bottom guard as shown (see Figure 8).
- 10. Slide the tool under the bottom guard as shown, in a "T" formation under the tubes (see Figure 9).
- 11. While holding the bottom guard horizontal under the two tubes with the tool or a wrench or hand if cool, tighten the bolt until snug. Ensure the probe guard is tightened against the tubes.
- 12. Fill the frypot with oil.
- 13. Repeat steps on any adjacent frypots.
