

LOV/OCF Preventive Maintenance Checklist

CAN cable
End-of-line resistor

The CAN cable connects the computers. The end-of-line resistor is essential for the system.

M3000 showing software version number.

Oil is shown rising toward top-off probe.

- Are all CAN and SMT connections tight?
- Are software versions current? Update if necessary.
- Is end-of-line resistor present?
- Is the ATO system operating successfully?
(check each vat tops off).
- Is the AIF system operating successfully?
(perform an auto filter on each vat).
- Check and record Error messages.
- Check and record filter bypass on all computers.
- Is the filter pan/filter pad free of excess sediment?

Computer Error Messages				
Computer 1	Computer 2	Computer 3	Computer 4	Computer 5

Filter Bypasses				
Computer 1	Computer 2	Computer 3	Computer 4	Computer 5
