Bulletin 2011-03-ABDE

Page 1 of 1

Date: 02/1/2012*

SUBJECT: UHC-P Minicomputer Controller

***Revision of Bulletin 2011-03-ABDE 4/8/12**

Palm Pilots used to program a UHC-P cabinet are no longer made by Palm and no longer available from suppliers. Frymaster is out of Palm Pilots. The replacement device, described below, is a minicomputer.

Service providers should locate Palm Pilots purchased in the past and ensure they are operational. Early models, if left uncharged, lost user-added software. These units can be recharged and reloaded with UHC-P software downloadable from Frymaster's web site.

It is highly advisable to keep Palm Pilots charged for future service calls. The software can be found on our website under the link listed below. Instructions for loading and managing the software, including passwords, can be found in the UHC-P manual, 819-6002, downloadable from our literature page.

Frymaster has a replacement for the Palm, a minicomputer with a specially configured infrared data cable. Software on the computer is nearly identical to the cabinet software on the Palm. The part number and kit contents (\$450 net) are provided below. The minicomputer is warranted by the computer manufacturer for 10 months from the date of receipt. **An international power adapter is not part of the kit but is available separately: 807-5316.** (\$34 net).

Due to special configuration requirements for the infrared data cable and the computer, data cable and software will not be made available separately.

A minicomputer, special UHC-P software and an infra red communication device are replacing the Palm Pilot (inset above right) as a means of programming the UHC-P cabinet.
