

Service Bulletin

This bulletin addresses replacing drain rotary actuators with a NEW reversing actuator.

Subject: Reversing Drain Rotary Actuators

Models: McD's BIGLA30-T, McD's BIELA14-T, FQG/E30T, 60T, 80T, 100T, 120T Touch Screen Fryers

4/23/2026

In late 2025, Frymaster began replacing drain actuators in current production with reversing rotary actuators on **DRAIN VALVES ONLY**.

These actuators will reverse when they close on something in the drain, such as a clean out rod, protecting the actuator and drain valve.

There are two different reversing actuators for the FilterQuick and McDonald's touch screen fryers using the 4000 series controllers. They are color coded slightly different than previous actuators. The colors are (left hand PN 130253016 blue and yellow), (right hand PN 130253015 black and yellow) depending on the location (see Figure 1).

Current **DRAIN** actuators on the FilterQuick Touchscreen and McDonald's Touch screen fryers may be replaced with these new actuators, to prevent later harm to the drain valves. The current blue and black drain actuators can be replaced with the blue/yellow and black/yellow reversing actuators respectively.

Figure 1 Reversing Actuators

THE REVERSING ACTUATORS SHOULD ONLY BE USED ON DRAIN VALVES!
